

See wood.
Feel wood.
Touchwood.

TOUCHWOOD™

Solid wood living within your reach

Touchwood brings solid wood living within your reach.

You dream it, Touchwood makes it real. And, keeps it realistic. Our advanced precision technology, unique interlocking construction and speedy assembly system combine to minimise materials and labour costs right down the line. Touchwood is a competitively priced and design-flexible solid wood construction system.

Touchwood is just perfect for rural, coastal and urban living and is ideal in light commercial applications such as schools, offices, motels and community buildings.

The Touchwood Solid Wood Building System is a revolution in solid wood home design. It combines conventional floor and roof construction with a solid wood interior/exterior wall system. The system is based on an innovative, modular wall panel design that can be quickly and easily screwed together to create a strong and durable finished wall surfaces with a modern, stylish appearance.

You and your visitors will delight in the interior finish of your new Touchwood home. The unique round-edged board joints deliver a softer, more aesthetically pleasing look and feel. You can choose to expose the rich, warm natural grain with a clear finish or lighten and brighten the interior walls with a touch of "natural blonde".

Touchwood. Dream homes do come true.

When you select Touchwood as your solid timber home building system, you're opening up the most important lifestyle choice of all – your freedom to choose.

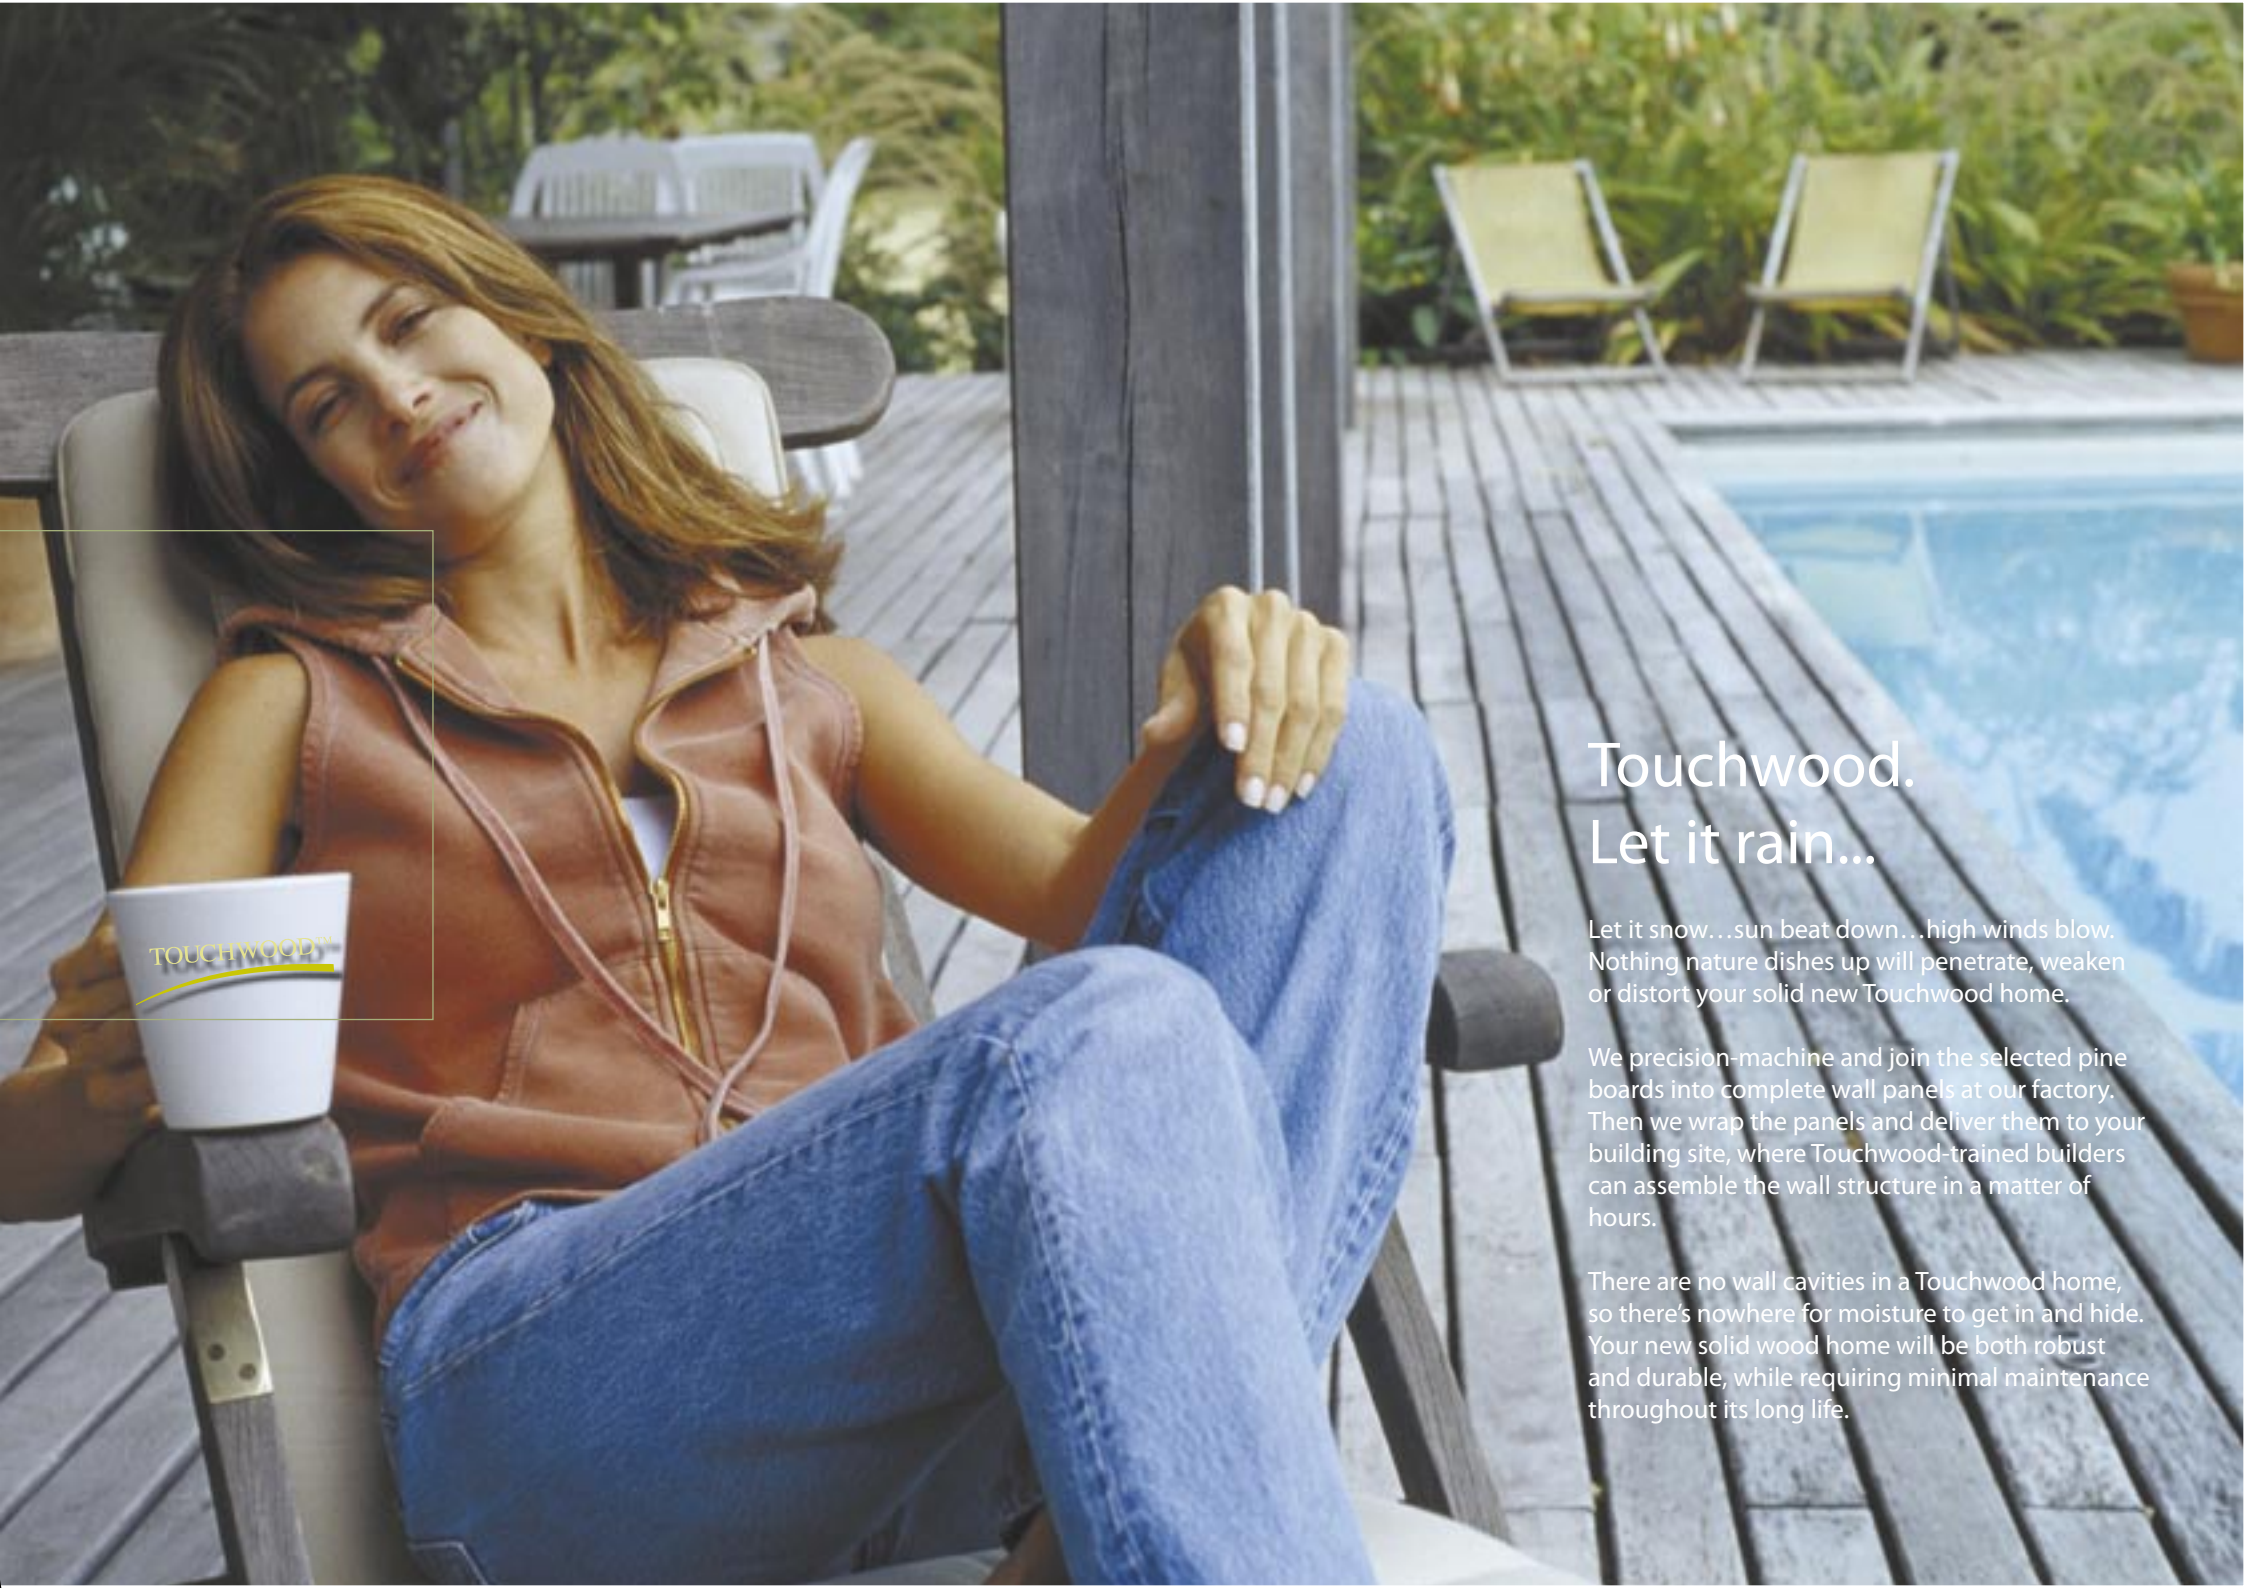

That choice may be one of our standard plans, either as is, or adapted to suit your particular requirements. It may be an original design prepared by an independent architect or draftsman. Or, it could be your own personal plan, developed in collaboration with your Touchwood-franchised builder.

Whatever plan you choose, we will manage everything, from finalising the design concept through consents and permits, materials purchasing, sub-contracting and construction to the finishing touches.

TOUCHWOOD™

Solid wood living within your reach

TOUCHWOOD™

Touchwood. Let it rain...

Let it snow...sun beat down...high winds blow. Nothing nature dishes up will penetrate, weaken or distort your solid new Touchwood home.

We precision-machine and join the selected pine boards into complete wall panels at our factory. Then we wrap the panels and deliver them to your building site, where Touchwood-trained builders can assemble the wall structure in a matter of hours.

There are no wall cavities in a Touchwood home, so there's nowhere for moisture to get in and hide. Your new solid wood home will be both robust and durable, while requiring minimal maintenance throughout its long life.

One of the beauties of the Touchwood Solid Wood Building System is the extensive design flexibility when it comes to size, layout and exterior cladding options. Which also makes it the perfect building system for the modern day bach, alpine chalet or lakeside hideaway. It's your dream home, so the ultimate choice of design, layout and feature materials is all yours.
